

Question Bank

Class: F.Y.B.Sc.

Sem: I

Subject: Physical & Inorganic Chemistry-I

- Which of the following is a type of logarithm,  
a) Briggsian      b) Nepierian      **c) Both a & b**      d) Partial
- The integral part of a logarithm is called as,  
a) Mantissa      b) Antilog      **c) Characteristic**      d) Mean
- $\log A/B = ?$   
a)  $\log A + \log B$       **b)  $\log A - \log B$**       c)  $\log A \times \log B$       d) Zero
- Mantissa is determined by using.....  
a) **Logarithm table**      b) Formula      c) Manual calculation      d) None
- $\log_e = \dots\dots\dots\log_{10}$   
a) 0.4343      b) 1.987      c) 3.14      **d) 2.303**
- $\log x^n = \dots\dots\dots$   
**a)  $n \log x$**       b)  $\log x/n$       c)  $\log n/x$       d) 10
- $\log 10 = \dots\dots\dots$   
a) 10      b) 100      **c) 1**      d) 0.1
- $\log 2 = \dots\dots\dots$   
a) 0.4343      **b) 0.3010**      c) 0.693      d) 2.303
- Characteristic can be positive or negative.  
**a) True**      b) False      c) Cannot be predicted      d) All of these

10. Mantissa is always positive.

- a) **True**            b) False            c) Cannot be predicted            d) All of these

11. If  $\log y = x$  then,  $y =$

- a)  $100 - y$             **b) Antilog x**            c)  $x = y$             d)  $x^y$

12. The value of 'e' is

- a) **2.7182**            b) 2.303            c) 4.182            d) 3.093

13. Graph has .....quadrants.

- a) 2            b) 3            **c) 4**            d) 5

14. A two dimensional graph has .....axes.

- a) **2**            b) 3            c) 4            d) 5

15. The point of interception of axes is called,

- a) Intercept            b) Constant            c) co-ordinate            **d) Origin**

16.  $y = mx + b$  is the equation of,

- a) hyperbola            **b) Straight line**            c) Ellipse            d) circle

17. If the intercept on y-axis is zero then,

- a) **line passes through origin**            b) line is not straight  
b) line is exponential            d) line is zigzag

18. The slope of the line is shown by the symbol,

- a) x            **b) m**            c) y            d) b

19. For the line parallel to x-axis,

- a) **slope = 0**            b) slope = infinity            c) intercept is zero            d) None

20. For the line parallel to y-axis,

a) slope = 0                      **b) slope = infinity**                      c) intercept is zero                      d) None

21. Two straight lines are said to be perpendicular to each other when the product of their slope is

a) 5                      b) 1                      **c) -1**                      d) 0

22. In the relation  $y = f(x)$

**a) y is dependent variable**                      b) y is independent variable  
b) y is zero                      d) y is constant

23. In the relation  $y = f(x)$

a) x is dependent variable                      **b) x is independent variable**  
b) x is zero                      d) x is constant

24. If  $y = x^n$  then,  $dy/dx = \dots\dots$

a)  $x^{n-1}$                       **b)  $nx^{n-1}$**                       c)  $(n-1)x$                       d)  $(n-1)x^n$

25. If  $y = 5$  then  $dy/dx = \dots\dots$

a)  $5x$                       **b) zero**                      c)  $x^5$                       d)  $x-5$

26. If  $y = 5x$  then  $dy/dx = \dots\dots$

a)  $5x$                       b) zero                      **c) 5**                      d) x

27. If  $y = x+1$  then  $dy/dx = \dots\dots$

**a) 1**                      b) zero                      c) 5                      d) x

28. If  $y = x/2$  then  $dy/dx = \dots\dots$

**a)  $1/2$**                       b)  $2x$                       c)  $x^2$                       d) 1

29. If  $y = \ln x$  then  $dy/dx =$

**a)  $1/x$**                       b)  $2x$                       c)  $x^2$                       d) 1

30. According to Ohm's law, current flowing through a conductor is directly proportional to

- a) Length                      **b) EMF**                      c) Resistance                      d) Sp. Resistance

31. Resistance is directly proportional to

- a) Length**                      b) Area of cross section                      c) current                      d) voltage

32. Resistance is inversely proportional to

- a) Length                      **b) Area of cross section**                      c) sp. Resistance                      d) current

33. The unit of resistance is

- a) mho                      **b) ohm**                      c) volt                      d) cm

34. The unit of conductance is

- a) mho**                      b) ohm                      c) volt                      d) cm

35. Conductance is .....to resistance

- a) directly proportional                      **b) inversely proportional**  
c) similar                      d) not related

36. Specific conductance is the conductance of a conductor having

- a) 2 cm length & 2 cm<sup>2</sup> area of cross section.  
**b) 1 cm length & 1 cm<sup>2</sup> area of cross section.**  
c) 5 cm length & 5 cm<sup>2</sup> area of cross section.  
d) 10 cm length & 10 cm<sup>2</sup> area of cross section.

37. Conductivity cell is used to measure .....of a solution.

- a) conductance**                      b) resistance                      c) length                      d) volume

38. In a conductivity cell, the ratio  $l/A$  is called as,

- a) Specific resistance                      b) Specific conductance                      **c) cell constant**                      d) EMF

39. ....solution is used to determine cell constant.

- a) **KCl**                      b) HCl                      c) NaOH                      d) KOH

40. Specific conductance (Ls) = cell constant (K) x .....

- a) observed resistance                      **b) observed conductance**                      c) concentration                      d) volume

41. cell constant (K) = Specific conductance (Ls) x .....

- a) observed resistance**                      b) observed conductance                      c) concentration                      d) volume

42. Specific conductance (Ls) .....with increase in concentration.

- a) increases**                      b) decreases                      c) remains constant                      d) randomize

43. Equivalent conductance .....with increase in concentration.

- a) increases                      **b) decreases**                      c) remains constant                      d) randomize

44. In conductometric titrations, equivalence point is determined by.....

- a) color indicator                      **b) graphical method**                      c) calculation                      d) guessing

45. Both elements of 1st period contain valence electrons in

- a) M shell                      b) N shell                      **c) K shell**                      d) S shell

46. In the periodic table, helium is placed at

- a) top left corner                      b) bottom right corner                      c) bottom left corner                      **d) top right corner**

47. Across the period the atomic size decreases due to

- a) shielding effect                      b) photoelectric effect  
**c) increase in nuclear force of attraction**                      d) decrease in nuclear force of attraction

48. Down the column the atomic size

- a) increases**                      b) decreases                      c) remain same                      d) fluctuates

49. Down the column the atomic size increases due to

- a) shielding effect                      b) photoelectric effect  
**c) addition of new shell**                      d) decrease in nuclear force of attraction

50. Down the column the electronegativity  
a) increases      **b) decreases**      c) remain same      d) fluctuates
51. Down the column the ionization energy  
a) increases      **b) decreases**      c) remain same      d) fluctuates
52. Down the column the electron affinity  
a) increases      **b) decreases**      c) remain same      d) fluctuates
53. Across the period the atomic size.....from left to right  
a) increases      **b) decreases**      c) remain same      d) fluctuates
54. Across the period the ionization energy.....from left to right  
**a) increases**      b) decreases      c) remain same      d) fluctuates
55. Across the period the electronegativity.....from left to right  
**a) increases**      b) decreases      c) remain same      d) fluctuates
56. Across the period the electron affinity.....from left to right  
**a) increases**      b) decreases      c) remain same      d) fluctuates
57. Ionization potential is measured in.....  
a) kcal      b) kJ      **c) eV**      d) erg
58. The periodic table consists of.....blocks.  
a) 2      b) 3      c) 1      **d) 4**
59. The first group elements are called as.....  
**a) alkali metals**      b) alkaline earth metals      c) transition metals      d) noble gases
60. The second group elements are called as.....  
a) alkali metals      **b) alkaline earth metals**      c) transition metals      d) noble gases

61. The zero group elements are called as.....  
a) alkali metals      b) alkaline earth metals      c) transition metals      **d) noble gases**
62. The d-block elements are called as.....  
a) alkali metals      b) alkaline earth metals      **c) transition metals**      d) noble gases
63. The f-block elements are called as.....  
**a) Lanthanides & actinides**      b) alkaline earth metals      c) transition metals      d) noble gases
64. s-orbital can accommodate a maximum of ..... electrons.  
**a) 2**      b) 6      c) 10      d) 14
65. p-orbital can accommodate a maximum of ..... electrons.  
a) 2      **b) 6**      c) 10      d) 14
66. d-orbital can accommodate a maximum of ..... electrons.  
a) 2      b) 6      **c) 10**      d) 14
67. f-orbital can accommodate a maximum of ..... electrons.  
a) 2      b) 6      c) 10      **d) 14**
68. The ionization energy depends on,  
a) Atomic size      b) electronic configuration      c) screening effect      **d) All of these**
69. The tendency of an atom in a molecule to attract shared electrons is called.....  
a) electron affinity      **b) electronegativity**      c) ionization energy      d) atomic size
70. The amount of energy released when an extra electron is added to an isolated gaseous atom in its ground state is called .....  
**a) electron affinity**      b) electronegativity      c) ionization energy      d) atomic size
71. The amount of energy required to remove an electron from an isolated gaseous atom in

its ground state is called .....

- a) electron affinity      b) electronegativity      **c) ionization energy**      d) atomic size

72. The distance of the outermost orbital from the center of nucleus is called.

- a) electron affinity      b) electronegativity      c) ionization energy      d) atomic radius

73. The ion having positive charge is called,

- a) cation**      b) anion      c) free radical      d) carbene

74. The ion having negative charge is called,

- a) cation      **b) anion**      c) free radical      d) carbene

75. Cation is bigger in size than anion.

- a) True      **b) False**      c) Not related      d) same

76. Anion is bigger in size than Cation.

- a) True**      b) False      c) Not related      d) same

77. Crown ether is.....ligand

- a) monodentate      b) bidentate      **c) polydentate**      d) tridentate

78. The electronic configuration of Lithium is,

- a)  $1s^2 2s^1$**       b)  $1s^1$       c)  $1s^2 2s^2$       d)  $1s^2 2s^2 2p^1$

79. The electronic configuration of Helium is,

- a)  $1s^2 2s^1$       **b)  $1s^2$**       c)  $1s^2 2s^2$       d)  $1s^2 2s^2 2p^1$

80. The electronic configuration of Hydrogen is,

- a)  $1s^2 2s^1$       **b)  $1s^1$**       c)  $1s^2 2s^2$       d)  $1s^2 2s^2 2p^1$

81. The electronic configuration of Sodium is,

82. Sodium is.....

a) **Metal**

b) Non-metal

c) Gas

d) Liquid

83. Hydrogen is .....

a) Metal

b) Non-metal

c) **Gas**

d) Liquid

84. Formation of ions is called as.....

a) **ionization**

b) Hydrolysis

c) Solvation

d) addition

85. The s-block elements are good.....

a) oxidizing agents

b) **reducing agents**

c) ligands

d) nucleophiles

86. The adhesion of atoms/ ions/ molecules on the surface is called,

a) absorption

b) **adsorption**

c) reaction

d) addition

87. The surface on which adsorption takes place is called,

a) adsorbate

b) **adsorbent**

c) solute

d) solvent

88. The material which gets adsorbed is called,

a) **adsorbate**

b) adsorbent

c) solute

d) solvent

89. Activated charcoal is generally used to remove....

a) gases

b) acids

c) **coloured impurities**

d) water

90. Isotherms are determined at.....

a) variable temperature

b) Low temperature

c) fluctuating

d) **constant**

91. In several reactions, activated charcoal is used as.....

a) reactant

b) metal catalyst

c) **heterogeneous catalyst**

d) energy source

92. The integration is of ..... types.

- a) 1                      **b) 2**                      c) 3                      d) 4

93. The integration is of two types,

- a) partial integration & complete integration                      b) Standard integration & general integration  
c) Integration without limits & within limits                      d) Important & non-important

94.  $\int x dx =$

- a)  $x + C$                       b) 1                      c) 0                      **d)  $x^2/2 + C$**

95.  $\int (5x + 2) dx =$

- a)  $5x + C$                       b)  $x + C$                       **c)  $5x^2/2 + C$**                       d)  $10x + C$

96. Integration is ..... to that of differentiation

- a) similar                      **b) opposite**                      c) irrelevant                      d) None

97. Constant must be used in,

- a) integration with limits                      **b) integration without limits**                      c) both                      d) none

98. Integration without limits is called as.....

- a) Definite integration                      **b) Indefinite integration**                      c) Useful integration                      d) All

99. Integration within limits is called as.....

- a) Definite integration**                      b) Indefinite integration                      c) Useful integration                      d) All

100.  $\int d \ln V =$

- a)  $\ln V$                       b)  $1/V$                       c)  $V$                       d)  $V^2$
